

EIIP Project Outline

Sponsoring Committee: Area Sources Committee

Project Title: Area Source Methods Documents (FY2000)

Contractor Support Funds: \$72,000

Description of Activities: This task will provide for the completion of new preferred methods chapters for area source categories, will perform maintenance revisions to existing EIIP area source documents, and will draft new guidance for using survey techniques to produce area source emissions inventories. New chapters will be completed for autobody refinishing and unpaved roads. Short methodology abstracts will be completed for 3 additional area source categories, selected from vehicle fires, leaking underground storage tanks, charbroiling, and asphalt roofing. Existing EIIP area source chapters will be reviewed and updated to reflect regulatory changes, to correct obsolete information and references, update the data management sections of each chapter, and to identify priority needs for area source emission factor improvements. The survey guidance document will consolidate and update existing information into a single EIIP document and fill in gaps in this guidance to meet state and local agency needs for more detailed and complete guidance on how to perform surveys of area sources.

Deliverables:

Technical memo summarizing available survey guidance (5/31/00)

Technical memo summarizing proposed maintenance revisions to existing chapters (6/30/00)

Final auto refinishing chapter (7/31/00)

Final unpaved roads chapter (8/31/00)

Draft area source survey guidance document (8/31/00)

Revised area source chapters incorporating maintenance revisions (9/30/00)

Three area source abstracts completed (9/30/00)

Significant Dates (Start, End, Milestones):

Start - April 2000

End - September 2000

Milestones - See deliverables above
